## Position of the maximum

P29094\_en

Write a function that returns the position of the maximum element of  $v[0..m]$ . If there is a tie, the smaller position must be returned.

### Precondition

$0 \leq m < \text{size of } v$ .

### Interface

C++	<code>int position_maximum(const vector&lt;double&gt;&amp; v, int m);</code>
C	<code>int position_maximum(double* v, int m);</code>
Java	<code>public static int positionMaximum(double[] v, int m);</code>
Python	<code>position_maximum(v, m) # returns int</code>
MyPy	<code>position_maximum(v: list [ float ], m: int ) → int</code>

### Observation

You only need to submit the required procedure; your main program will be ignored.
